THE MEANING OF
MORTON MADE

For more than twenty-five years the name Morton has been synonymous with quality and integrity in the steel products industry. In the manufacture of railway appliances, steel doors, welded tubing, bathroom cabinets and other allied products, it has been the aim of the Morton Manufacturing Company to earn a good name through sheer merit. Through the years the company has achieved unquestioned leadership in each field and wherever the name Morton is mentioned, confidence, respect and good reputation have been accorded the company. A factory, modern in every respect; workers, whose standards of craftsmanship have always been the highest; materials of the most rigid specifications; finished products of superior construction; a personnel second to none—all are combined to give the buyer better value for every dollar he spends.

The policy of the Morton Manufacturing Company has been one of building up to a standard instead of down to a price. The various outstanding features that are to be found in Morton Steel Cabinets are conclusive evidence

that the company has earned the right to leadership. The fact that today, in every state in the Union and in many foreign countries, leading architects, contractors, builders, dealers and owners are specifying and using Morton Cabinets exclusively is a true measure of what has been accomplished.

The Morton Manufacturing Company, appreciating this endorsement and confidence, takes this opportunity of assuring its thousands of customers a continuance of the policy of making quality products at reasonable prices. To prospective customers, a cordial invitation is extended to become acquainted with the meaning of Morton Made.

The Modern Bathroom

Is receiving more attention than any other room in the home

We need to look back but a few years to see the almost revolutionary change that has taken place in bathrooms. It may be truly said that no other room is receiving more attention in the home. Today we contrast the old fashioned copper-lined tub with the beautiful built-in bathtub and shower; the marble-topped washstand with the present-day glistening white vitreous lavatory; the antiquated hopper toilet and wooden tank, with the modern syphon jet toilet combination; the out-of-date painted wooden cabinet with the distinctive steel, white enameled, sanitary cabinet.

The development of the Morton Line has kept pace with this remarkable change in equipment. Of all the fixtures in the bathroom, none receives more constant daily use than the cabinet.

With innumerable toilet articles, cosmetics, first aid kits, shaving paraphernalia, etc., kept there, the cabinet must be built to withstand the uses and abuses of the family, day and night. In fact, so much has the cabinet become a very necessary part of the modern bathroom that many architects, builders and contractors provide two cabinets—one each for the master and lady of the house. Leading hotels are also providing two cabinets per bathroom, choosing Models A or B, shown on pages seven and nine, for men, and "Venetian" or "Vanitie Venetian" Models, shown on pages twelve, thirteen and fifteen, for ladies. The introduction of color in bathrooms has shown an astonishing growth, and today Morton Steel Cabinets may be specially finished, if desired, at slight additional cost, to harmonize with tile or color schemes.

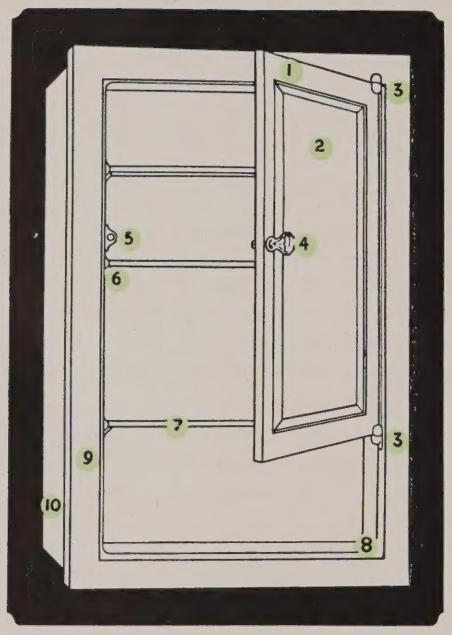
No longer is it necessary for anyone to shop around for a cabinet. In the Morton Line is the embodiment of all that is sound in construction, durable in service and artistic in appearance. Nowhere else may the buyer obtain such excellent value.

Morton Steel Cabinets meet that exacting requirement—sanitation. Every exposed part is readily accessible and may be kept clean and spotless with a damp cloth. The shelves are removable; sanitary rounded corners are provided so that dirt cannot be harbored. The cabinet is completely white enameled, permanently baked on, and may be maintained as beautiful and sanitary as the rest of the bathroom fixtures without arduous labor or expense.

A Morton Steel Cabinet is a permanent investment in beauty and utility.

Morton Steel Bathroom Cabinets

Are made to last as long as the building



This is the age of steel—steel buildings, steel trains, steel furniture, steel automobiles . . . and steel bathroom cabinets. Morton Steel Cabinets, whose superior features are listed herewith, are made to last as long as the building, to retain their beauty indefinitely and stand the wear and tear of every day service without one cent of cost for upkeep. Being built of rust-resisting steel, electrically welded, they will not warp or deteriorate; have no wearing parts to get out of order; do not require repainting, because the finish is permanently baked on. Note these outstanding features one by one, then ask yourself if Morton Steel Cabinets are not by far the finest you ever saw, from the standpoint of design, material, workmanship and finish.

1 All corners on the frame are electrically butt-welded. Each joint is fused so thoroughly that two pieces become as strong as one solid piece.

2 Heavy mirrors are supplied plain or with a beautiful one-inch bevel cut into the plate.

3 These rust-proof hinges are practically unbreakable (a 200-pound man has tested them by swinging on the door). *(Patent pending on these unique features)*

4 The crystal glass knob is very distinctive. An invisible cushion of rubber separates the knob from the door.

5 Note the friction catch, which is easily workable and holds the door securely in place.

6 The rust-proof brackets are die-cast and permanently fastened in the sides of the cabinet.

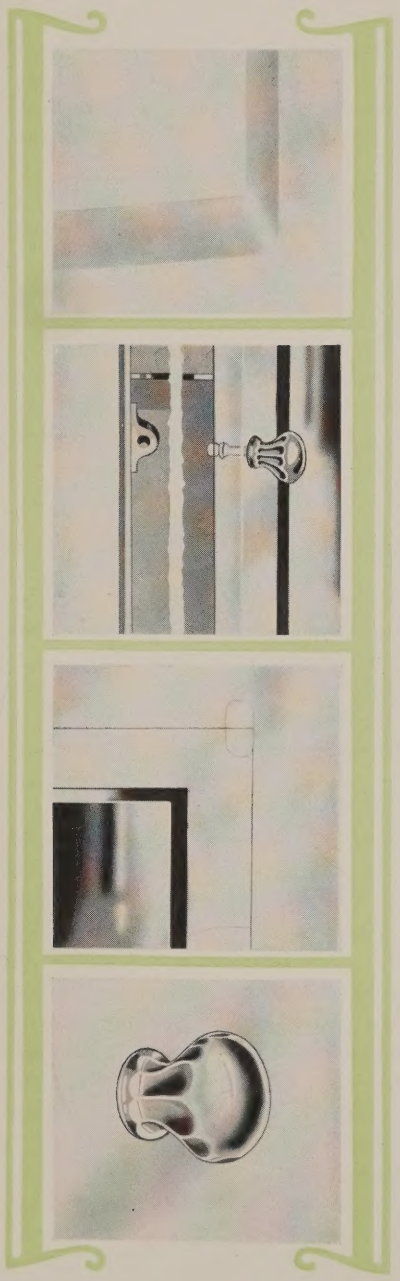
7 All Morton models are furnished with either enameled steel or plate glass, removable shelves.

8 Sanitary rounded corners (an exclusive Morton feature) allow no opportunity for dirt to collect in inaccessible points.

9 High gloss enamel finish sprayed and permanently baked on.

10 Cabinet is 5″ deep overall; frame has 1″ return flange. All parts of body are electrically spot welded.

Exclusive Features of Construction



The accompanying illustrations show features of construction found collectively *in no other line* of bathroom cabinets. They are examples of the progressiveness which is characteristic of the Morton organization, the vision to foresee what is necessary and best in bathroom cabinets and the ingenuity to carry out ideas which have been enthusiastically endorsed by leaders in the architectural and building professions.

Rounded Sanitary Corners

Every user of a bathroom cabinet will readily appreciate this outstanding feature. There are no joints in which dirt or dust may settle to become unsightly and unsanitary. The smooth curve at each corner permits instant cleaning, without scraping, rubbing or hard labor.

Friction Catch

Morton Engineers have perfected a friction catch that is far superior to the wearable catch usually found on the average cabinet. The Morton catch is exceedingly simple, easily workable, practical, foolproof, and holds the door securely in place.

Sturdy Hinges

Anticipating the fact that occasionally an unusually heavy strain is placed on the cabinet door, Morton Hinges have been made to sustain the weight of a safe door. Men weighing more than 200 lbs. have swung on these doors without making them sag. This added strength is a precaution which all users appreciate. Morton Hinges are rustproof, white enameled to harmonize with the rest of the cabinet, and anchored into place for permanence.

(*Patent pending on these unique features*)

Crystal Glass Knob

A finishing touch of distinction on all models, except the "Georgian", is a diamond shaped, crystal glass knob. Between the glass knob and the metal frame is a small, almost invisible cushion of rubber which acts as a washer and keeps the knob screwed tightly to the door.

The Superior Advantages of Morton Steel Cabinets

Thousands of architects, builders, construction companies, dealers and owners—from coast to coast and in foreign countries, have expressed complete satisfaction with the superior advantages of Morton Steel Bathroom Cabinets. They have confirmed their good judgment by specifying and installing them in every known type of home building. All have been impressed with the fact that the internationally known Morton organization has, in every instance, regardless of the model selected, a product so reasonably priced that its cost compares most favorably with that of inferior fixtures and even the old-style wooden cabinet.

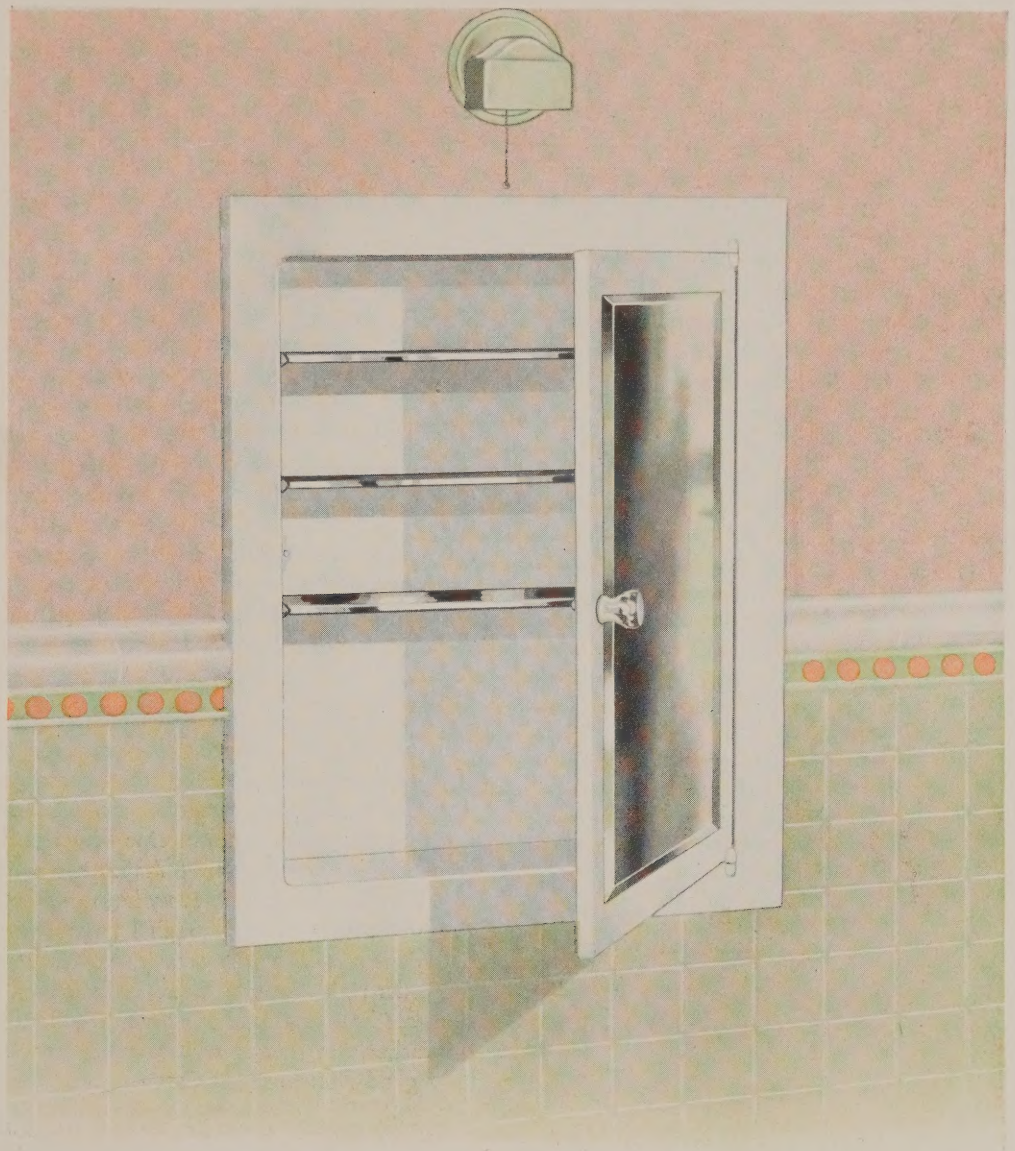
Preferred by Home Builders

Morton Steel Cabinets are the choice of home builders because they represent excellent value and, once bought, expense or worry for upkeep or replacement may be completely forgotten. It is a source of considerable satisfaction to a home builder to know that here, at least, is one expense item that he can dismiss from his mind once and for all. Complete harmony with the rest of the bathroom fixtures is an outstanding characteristic of Morton Steel Cabinets, regardless of whose make bathtubs, lavatories or toilets are selected. Most leading supply houses have sample cabinets on display, so that the home builder may select just the one he or she wishes. Whichever model is chosen, the purchase may be made with the positive assurance that, once installed, it will remain there for many, many years of economical service.

Appeal to Architects

Morton Steel Cabinets appeal to architects from a great many angles. When this line was introduced to the profession some years ago, it was not with the idea of offering something cheaper or just as good as other cabinets. Construction, beauty, sanitation, desirable improvements, were all taken into consideration and completely combined in what were destined to be the finest cabinets on the market. They were submitted for approval to the architects and builders, and have since been used very extensively in residences, apartments, apartment hotels, hotels, clubs, etc. Morton Steel Cabinets are more often being specified exclusively without the usual "or equal" clause, because architects know from experience that they have no equal. Standardized sizes, ease of specification, quick installation, dependability—these are additional reasons why the architect takes no chances in recommending Morton Steel Cabinets to his clients. Today, they are installed in every state in the Union and in many foreign countries, a lasting testimonial of fine workmanship and the culmination of an ideal to build better cabinets.

Model "A"



This model meets the popular demand for a neat, compact bathroom cabinet. It is made in four standard sizes and has typical first class construction and finish, four roomy shelves, French plate mirror, plain or beveled, and all of the modern refinements so distinctively Morton. This is an excellent cabinet for bathrooms in every type of home, is reasonably priced and will give years of economical service.

Dimensions and Weights

Mirror Size	Outside Dimensions	Wall Opening Required	Approximate Shipping Weight
10″ x 14″	15⅛″ x 19⅛″	13″ x 16¾″	30 lbs.
12″ x 16″	17⅛″ x 21⅛″	15″ x 18¾″	35 lbs.
14″ x 18″	19⅛″ x 23⅛″	17″ x 20¾″	40 lbs.
16″ x 20″	21⅛″ x 25⅛″	19″ x 22¾″	45 lbs.

5″ deep. 1″ return flange, making 4″ recess space.

Furnished with enameled steel or plate glass shelves. Plain or beveled mirror.

PLEASE ORDER BY MIRROR SIZE

The Preference of Contractors

More and more, Morton Steel Cabinets are becoming the preference of contractors. Time was when contractors gave very little thought to the bathroom cabinet and simply ordered a wood box and mirror, purchased hardware, assembled and fitted them together and wound up with a coat of paint. But alert contractors found out that this was a costly process and, after all, the finished job was not at all satisfactory, what with the lack of harmony with other fixtures, warping and sagging and the need of periodical painting. Today, contractors in increasing numbers are switching to Morton Steel Cabinets, for three outstanding reasons: Better appearance, permanence, instant installation. "Out of the carton, into the wall" means minimum labor—a fact very close to the contractor's heart. When he can improve a job with less labor and for a total cost no greater than what he pays for inferior workmanship, he has accomplished something which means pleasure and profit for him and his customers.

More Profits for Dealers

Supply dealers have learned that goods well displayed are easily sold. Consequently, an attractive arrangement of Morton Steel Cabinets in their showrooms results in a fast-moving, profitable specialty. In view of the fact that architects, contractors, home, apartment and hotel builders have formed the habit of visiting showrooms to personally select their requirements, the supply dealer has seized this opportunity to extend his line to include these high class cabinets, which sell on sight. They go far to brighten a showroom, with their glistening white finish and beautiful plate glass mirrors. Altogether they perform a dual service of helping the buyer and declaring a profit for the seller.

First impressions are invariably lasting impressions. Dealers who, for the first time, actually see Morton Steel Cabinets, are astonished with their sound construction, beautiful finish and general attractiveness. One dealer said, "I want one in my home." Another remarked, "I'll recommend them in every home we build." A third stated, "Even though I have a carload of wooden cabinets in transit, you can have my order right now." These favorable expressions are heard all over the country and indicate the enthusiasm that is aroused when people see how good Morton Steel Cabinets really are.

People usually associate exceptional quality with high price, but this is not true of Morton Steel Cabinets. The modern equipment and high production of the Morton plant make it possible to sell these cabinets at very reasonable prices.

Architects, contractors or dealers who would like to examine a cabinet to actually see its many excellent points are cordially invited to write and have a Morton representative call. No obligation is involved in this demonstration.

Model "B"

Because of the convenient open shelf, this model is being installed in thousands of bathrooms. The cabinet has three additional shelves, thus providing ample room for accommodating the needs of the average family. It is used extensively in residences, apartments, apartment hotels and hotels, and is very reasonably priced. This model is made in four standard sizes, so that the buyer may choose the one which best suits any particular bathroom.

Easier Sales for Realtors

Because prospective home buyers instantly look for the unusual features in a house, the enterprising realtor can stress the point that a bathroom *is* modern if it has a Morton Steel Cabinet. Many instances could be cited where a house, lacking up-to-date improvements, is unsalable and remains so for a considerable length of time. Every woman has a right to find fixtures that are of good taste, distinctive appearance and require a minimum of labor to keep clean. In these respects, Morton Steel Cabinets will appeal to her, for in no place is her inspection more critical than the bathroom.

A commodious and beautiful cabinet, readily cleaned, with plate glass mirror and the improvements found exclusively in the Morton Line, will do more than catch her eye the moment she sees the bathroom; she will recognize that here her burden will be lighter. This one feature alone will help to make the sale, for unless the woman is pleased, the chances of selling the house are very remote.

The same is largely true in the renting of an apartment. Unless the bathroom is up-to-date it may remain vacant for a long time. It is easy to enumerate many cases where prospective renters were instantly delighted when they saw a Morton Steel Cabinet --- particularly a "Venetian," "Vanitie Venetian" or "Georgian" all-mirror door model. Morton Cabinets sell on sight!

Readily Specified and Ordered

Every care has been exercised to enable architects, builders, dealers, etc., to specify and order Morton Steel Cabinets, with the assurance that they will receive exactly what they desire. As will be noted, there are usually four standard sizes to each model. Each size gives the dimensions of the mirror and wall opening required, together with the approximate shipping weight, from which freight or express charges can be gauged. All models are 5″ deep, with a 1″ return flange, making a 4″ recess space. In ordering, it is suggested that the model required and mirror size be clearly specified. All cabinets, with the exception of Models F, H and K, may be had with either plain or beveled mirror. Models F, H and K all have beveled mirrors and may be obtained with or without the etching. White enameled steel or plate glass, bulb edged shelves, are optional.

Regardless of the model selected, the buyer is assured of first class quality throughout. Every Morton Steel Cabinet is identical in construction and carefully inspected before shipment.

Model "E"

This cabinet is mounted on the wall and therefore requires no wall opening. Made with or without open shelf below, it is ideal for those remodeling bathrooms or desirous of adding an extra cabinet in the bathroom or over a separate lavatory. Many housewives also find this cabinet, placed near the sink in the kitchen, very convenient for accommodating soap, scouring rags and powders, small brushes, first aid kits, etc.

The New
MORTON MODEL AF "VENETIAN"

THE above illustration shows the new Model AF "Venetian" style Morton Medicine Cabinet, especially designed and made for the large building operation. It satisfies the demand for an all-mirror door cabinet of attractive appearance at a price that is right. To make this possible, this model is made in one size only—16x24" beveled mirror, delicately etched, with four decorative rosettes and a 5" deep cabinet with two glass shelves and roomy lower section. It is made of steel throughout, with white enamel finish permanently baked on, and all characteristic Morton superior features of construction. This cabinet, while made in quantity production and so priced, has been installed in some of America's finest buildings and is highly recommended to architects, builders, etc., for apartment and hotel installation.

Dimensions and Weight

Mirror Size	Outside Dimensions of Case	Wall Opening	Approximate Shipping Weight
16"x24"	15⅛"x20½"	13½"x20¼"	45 lbs.

Model "F"—The "Venetian"

This truly beautiful cabinet has found favor because its distinctive lines follow the modern trend to beautify the bathroom.

The large mirror, which completely conceals the cabinet, appeals particularly to women because it may be used as a dressing mirror. *An exclusive feature is a patented cushioned door designed to prevent breakage.*

Dimensions and Weights

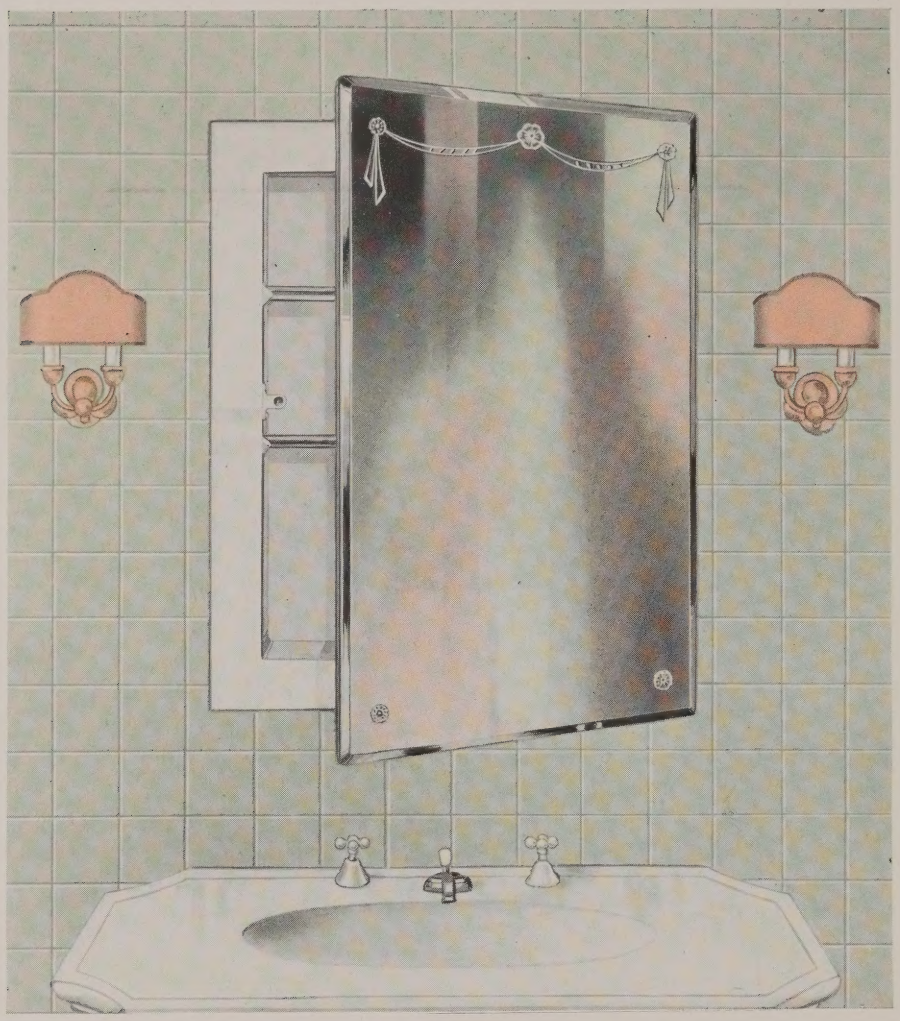
Model "H"—The "Georgian"



The Morton "Georgian" Bathroom Cabinet has been designed in response to a demand for a model that would fit in between the standard style cabinets Models A and B, and the beautiful "Venetian," Model F. The "Georgian" meets the growing demand for all-mirror door cabinets and has throughout the high quality construction and finish that is characteristic of Morton manufacture. The "Georgian" is made in one size only — 16 x 20" beveled mirror, with slightly rounded corners, and decorated with four silver plated rosettes. The mirror can be furnished with or without etching. *An exclusive feature is a patented cushioned door designed to prevent breakage.*

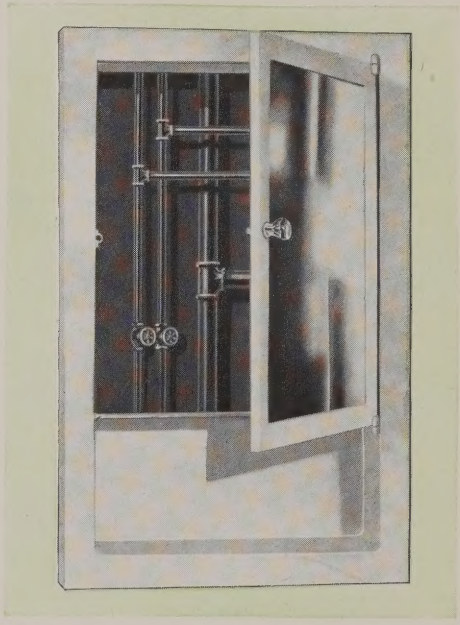
16″ x 20″	21⅛″ x 31⅞″	20¼″x31″	60 lbs.

5″ deep. 1″ return flange, making 4″ recess space.

In designing and completing the Morton Line of Steel Bathroom Cabinets, special models are included to meet unusual conditions. Oftentimes it is necessary that the plumbing in the wall be immediately accessible. To solve this problem and at the same time give the bathroom its usual cabinet or mirror facilities, the accompanying styles have met unanimous approval.

Model C is a standard Morton Steel Cabinet, mounted in a frame so that the entire cabinet may be swung outwardly. Three long hinges are provided so that the weight of the cabinet will be substantially supported when it is swung outwards with the shelves loaded. This type of cabinet is made both with and without the open shelf below, four sizes to each style. It is made to specifications and not carried in stock.



Model "D"

Model "D-1"

Dimensions and Weights

Mirror Size	Outside Dimensions	Wall Opening	Approximate Shipping Weight
10″ x 14″	12″ x 24⅛″	7¼″ x 10″	20 lbs.
12″ x 16″	14″ x 26⅛″	7¼″ x 12″	23 lbs.
14″ x 18″	16″ x 28⅛″	7¼″ x 14″	26 lbs.
16″ x 20″	18″ x 30⅛″	7¼″ x 16″	28 lbs.

Model D, as shown on the opposite page, consists of a hinged mirror with recessed shelf below and is intended for installations which do not permit the use of a recessed cabinet behind the mirror section. This style is an excellent substitute and has found favor in a great many instances. Model D-1 is the same as Model D, except that the door is not hinged. Not carried in stock but made to specifications in four standard sizes.

Where a deep cabinet is not desired, Model G is often specified as an auxiliary fixture in the bathroom, for placing over an extra lavatory, or in the kitchen adjacent to the sink. This model is a French plate mirror, set in a baked enamel steel frame, with cast brackets and plate or composition glass shelf. Model G-1 is the same as Model G, except that brackets and shelf are omitted. Both are made in four sizes, with plain or beveled mirror.

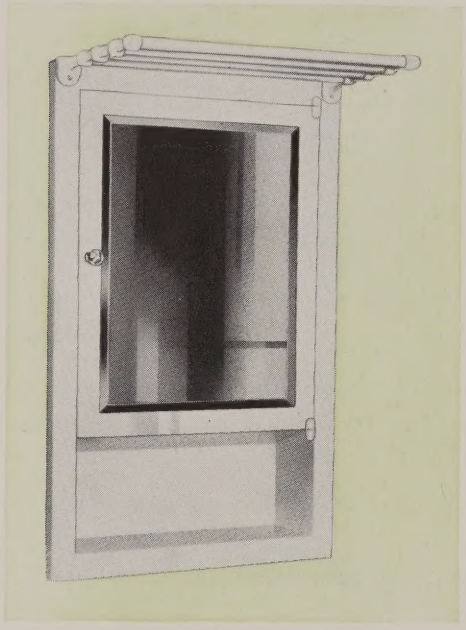
Morton Made Quality Fixtures

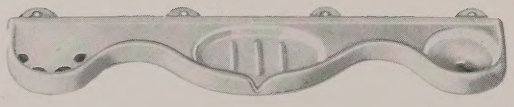
For the convenience of home owners who demand accessories that harmonize with and have the high quality of Morton Steel Cabinets, an attractive line of attachments is available for the bathroom. These consist of a combination toothbrush rack, soap tray and glass holder; towel bar, towel rack and bottom shelf



Towel Rack on Model "B" Cabinet

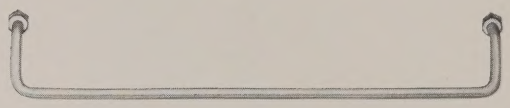
The above illustration shows a 4-bar, steel, porcelain enameled towel rack attached to a Model B cabinet. This shelf extends 9" and may be attached to any type cabinet excepting all-mirror door models F, H and K.

The toothbrush rack, soap tray and glass holder attachment is a durable casting, porcelain finished to harmonize with the cabinet. It may be attached to any open-shelf type cabinet.



Combination Attachment

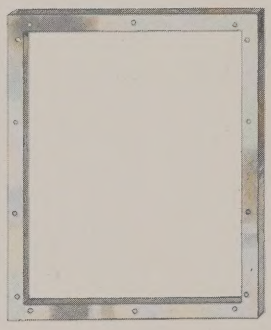
The towel bar is a heavily enameled, one-piece rod, which, when specified, may be permanently fastened to the bottom of the cabinet.



Towel Bar

Both the combination attachment and the towel bar *cannot* be attached to the same cabinet.

Morton recessed cabinets require an opening 4" deep. Wherever it is impossible to recess the

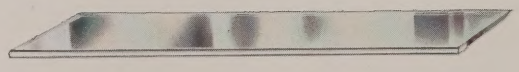


Extension Collar

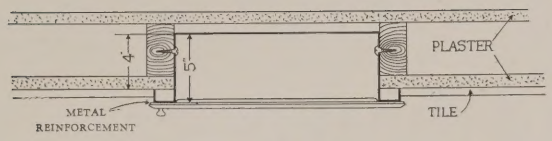
full depth, a steel, white enameled extension collar is provided. This permits the installation of a regular cabinet to extend beyond the wall surface without marring the appearance of the bathroom.

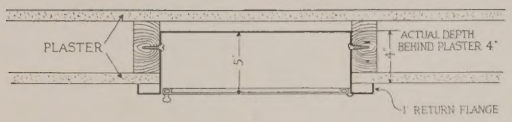
Either a plate glass or white composition glass bottom shelf can be had to fit any open-shelf model.

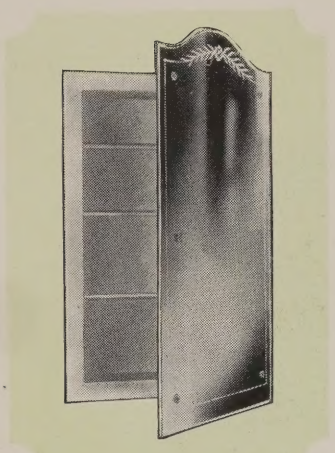
The above accessories may be obtained for a nominal charge.

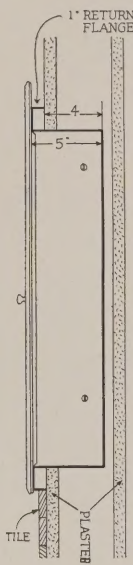


Bottom Shelf
Plate Glass or Composition Glass

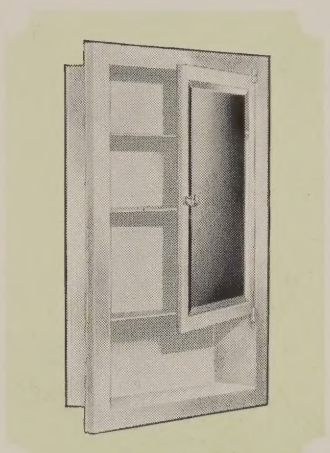








Model "F"—The "Venetian"



Model "B"

Details of Installation

"Out of the Carton Into the Wall"

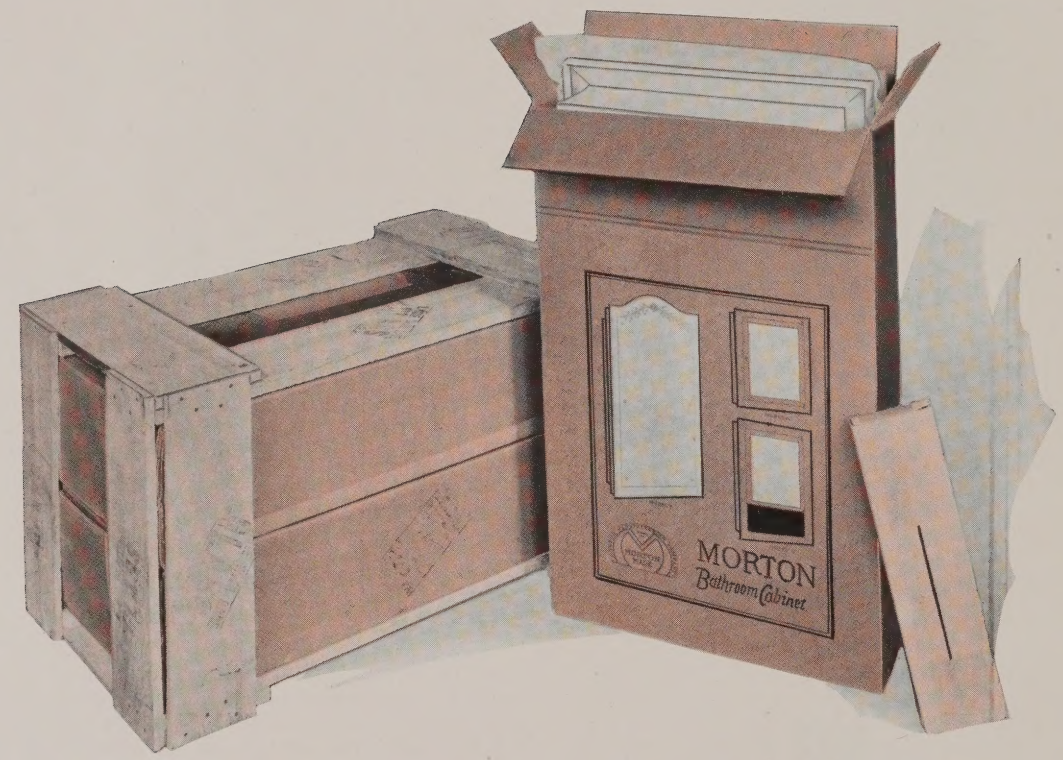
The accompanying perspectives show how quickly and simply Morton Steel Cabinets may be installed. The mechanic merely puts two screws into each side of the cabinet when it is placed in the wall opening, and the job is done. The shelves are then placed on the brackets. The complete installation takes but a few minutes.

The front perspective and cross-sectional views of Model B apply to all recessed models with the exception of Model F—which is also shown herewith.

The "Vanitie Venetian" requires a wall opening 15″ x 25½″. It is 5″ deep overall with a 1″ return flange, and can be recessed the usual 4″ or approximately 4¾″, if desired. No recess space is needed for the wings.

The "Georgian" model requires a wall opening 13″ x 16¾″. It is 5″ deep overall with a 1″ return flange, recessing 4″ or approximately 4¾″, if desired.

Packed and Shipped In An Improved Way



Before leaving the factory, each Morton Steel Cabinet is carefully inspected and packed. After being finally approved, the cabinet is first wrapped in a heavy sheet of waxed paper to protect the finish from scratching while it is being inserted or removed from the carton. Each cabinet is packed separately in a substantial corrugated board carton. The shelves are securely wrapped in an individual package, while the knob is also packed separately. The carton is well sealed when the cabinet, shelves and knob are enclosed, so that the complete unit arrives ready for instant installation. Where several cartons are shipped to one destination, they are put in a strong wooden crate as an added precaution.

Gentlemen:-

"Sevilla Court", the twenty-four family Co-operative Apartment House at Bala, a suburb of Philadelphia has just been completed.

Two of the Apartments are elaborately furnished in order to make possible the selling of the Individual Apartments more quickly.

In the twenty-four Apartments we have installed your "Venetian" mirror and it is a pleasure for me to state as Architect that I have never had a cabinet on which more favorable and continuous approval has been given. Personally I think it is the most beautiful medicine cabinet that I have ever seen. Incidentally the glass shelves with the round corners and carved to prevent the slipping of bottles is a clever inovation.

I intend to use your cabinet in my future designs.

Very truly yours,
Roy G. Pratt

Melbourne.

June 13th, 1927.

The Morton Manfg. Co.,
West Lake Street,
CHICAGO. ILL. U.S.A.

Dear Sirs,

I am more than satisfied with the appearance and perfect workmanship of the "Morton" Bathroom Cabinets that have been installed in the new Alexander's Hotel, Melbourne. This hotel is possibly the most modern in Australia. Before commencing plans for this new building my client and myself made a complete tour of America for the purpose of studying material, equipment and methods of construction in your newer hotels.

In giving a decision in favour of your "Morton" Cabinets for our bathrooms we feel we have installed an article that has a splendid appearance and which should give very excellent service in the new building.

Thanking you,

I remain,
Yours very truly,
Leslie M. Perrott

Testimony

LEADING architects here and abroad testify without hesitation that Morton Steel Bathroom Cabinets have no equal. They speak with authority. The few tributes reproduced herewith could be multiplied by the thousands. Wherever quality bathroom cabinets are used, the preference is for MORTON.

Chicago, Ill.

Attention-R. G. Kitzsteiner.

Gentlemen:

We have just set the five Model F Venetian Mirror Acme Bathroom Cabinets in the new residence of W. K. Kellogg at his country estate at Eagle Heights, Gull Lake, Michigan. It is a pleasure to write you this unsolicited testimonial, telling you that these cabinets are the finest cabinets in both workmanship and appearance that we have ever seen or used.

The selection of cabinets on this job was a trying one. The bathrooms are all in the finest Redwood all-over tile coverings, and we combed the entire cabinet manufacturing field to find a really suitable cabinet, one that would not mar the elegant wall surfaces, and one that would give a really finishing touch to a real bathroom. Other makes of cabinets, at higher prices, were tried and refused. Your Acme Model F met every demand--in fact, it is perfection in the cabinet world. We heartily recommend it and will use no other.

Yours truly,
Benjamin & Benjamin

Gentlemen:

It was our pleasure to specify some 250 Morton Steel Bathroom Cabinets, Model B, with 14x18 mirrors, for the new Hotel Davis, Chicago.

We wish to advise you that your cabinets were selected after a very careful investigation in the bathroom cabinet market.

Your service and cooperation was everything that could be desired and we want to assure you that a Morton representative will always find a welcome in our office.

Sincerely yours,
RISSMAN & HIRSCHFELD
